

Radhofan Azizi Ramdhani

Full-Stack Software Engineer | Next.js, Laravel, Python, Spring Boot, .NET | API & Cloud Solutions

Phone: +62-813-8480-7673 | Location: Depok, Indonesia | radhofanazizi@gmail.com | [LinkedIn](#) | [GitHub](#) | [Website](#)

SUMMARY

Full-stack software engineer with 2 years of experience building internal business systems, web applications, and research-oriented machine learning software. Over this period, worked extensively with TypeScript, Spring Boot, .NET, Laravel, and Python through professional engagements and hands-on personal projects. Experienced in developing authentication, role-based access control, dashboards, database-backed workflows, microfrontends, and deployment pipelines. Strong computer science foundation with national competitive programming achievements and an accepted research publication in the AI/Machine Learning domain.

AREAS OF EXPERTISE

- **Frontend Development:** React.js | Next.js | JavaScript | Laravel | CodeIgniter | TypeScript | HTML5 | CSS3 | Tailwind CSS | Material UI
- **Backend Development:** Java | Spring Boot | .NET | Node.js | Django | NestJs
- **Database Management:** PostgreSQL | OracleDB | MS SQL | MySQL
- **Tools & Cloud:** Git | GitHub | GitHub Actions | Docker | Jenkins | AWS S3 | Google Cloud Platform | CI/CD
- **AI/ML Engineering:** Python | TensorFlow | PyTorch | scikit-learn | LLM APIs | LangChain | LlamaIndex | FAISS | Weaviate

EDUCATION

Bachelor of Computer Science | Telkom University | Bandung, ID **Sep 2022 – Jun 2026**

- Cumulative GPA: 3.82 / 4.00.

WORK EXPERIENCE

Software Engineer | Part-Time | Zeta Solutions | Bandung, ID **Jun 2025 – Apr 2026**

- Built order management, warehouse management, and internal chat features for 30+ internal users using Next.js and PostgreSQL.
- Migrated 10,000+ legacy records from Excel and paper-based workflows into a centralized database-backed application.
- Developed 15+ reusable React components, including Kanban boards, file uploaders, and real-time chat modules.
- Implemented a Qiankun-based microfrontend setup to separate internal modules and simplify deployment to AWS S3.
- Designed responsive wedding invitation websites for client campaigns supporting 1,000+ visitors across mobile and desktop browsers.

Software Engineer | Intern | Indonesian State Electricity Company PLN | Jakarta, ID **Jun 2025 – Aug 2025**

- Built an internal Unit Price Contract management system to digitize procurement workflows and reduce manual document tracking.
- Developed full-stack features using Next.js and PostgreSQL, including JWT authentication, custom middleware, and role-based access control.
- Designed protected routes and permission-based UI flows for different internal user roles.

TRAINING & RESEARCH PROGRAMS

Software Developer Trainee | LG CNS Enterprise Software Residency | Bandung, ID **Jun 2024 – Aug 2024**

- Selected as one of 30 students for a 12-week enterprise software engineering residency conducted with Telkom University.
- Completed 30+ full-stack training modules across Java, .NET, SQL, and enterprise application development workflows.
- Built applications using Java, .NET, OracleDB, and MS SQL, covering backend logic, database operations, and frontend integration.
- Worked with a 10,000+ line training codebase while practicing modular design, code organization, and software development standards.

AI/ML Research Trainee | University of Chicago | Remote, USA **Jan 2025 – Jul 2025**

- Selected as one of 50 computer science students in Indonesia for a research training program focused on AI software engineering and reproducibility.
- Reproduced machine learning research papers by implementing training pipelines, running experiments, and comparing model behavior with reported results.
- Fixed dependency issues, improved preprocessing pipelines, and reduced sources of non-deterministic training behavior in ML codebases.

PROJECTS

Timbanganten | Next.js, PostgreSQL, Tailwind CSS [Link](#)

- Developed a secure administrative platform for the Timbanganten Historical Foundation to digitize cemetery and historical records.
- Replaced manual recordkeeping with a PostgreSQL-backed search and management interface with filtering and reporting features.

CariCuaca | ASP.NET Core, .NET Core, CesiumJS [Link](#)

- Interactive weather app with a 3D globe (CesiumJS) where users click any point on Earth to retrieve live conditions, a 24-hour hourly forecast, and a 7-day outlook — powered by Open-Meteo and Nominatim with no API keys required.
- Designed a stateless ASP.NET Core backend with concurrent data fetching, per-IP rate limiting, in-memory caching, and graceful degradation; frontend built with React, TanStack Query, and Recharts, supporting metric/imperial toggle, city search, and up to 4-location session comparison.

Kakeibo - AniList Finder | Laravel, Livewire [Link](#)

- Full-stack anime tracking and community platform where users can log watch history, write reviews, build custom lists, and follow other users, with data sourced via the AniList GraphQL API.
- Implemented a read-through cache layer that queries AniList's GraphQL API and upserts results locally, alongside an admin panel for user moderation, report management, and manual cache refresh.

Explorato | Spring Boot, JavaFX, PostgreSQL, Redis, RabbitMQ [Link](#)

- A single-player guild management game with a JavaFX desktop client backed by a Spring Boot REST and SSE API, PostgreSQL persistence, Redis for live expedition progress caching, and RabbitMQ for background job processing.
- Implemented core game systems including party formation, turn-based combat resolution, an equipment crafting pipeline, guild facility upgrades, and real-time expedition streaming via Server-Sent Events.

LEADERSHIP

Head Assistant Coordinator of Computing Laboratory | Telkom University | Bandung, Feb 2025 – Feb 2026
ID

- Led 50+ student assistants across Computing Laboratory, coordinating internal roles, recruitment, study groups, and daily laboratory activities.
- Organized technical workshops with industry alumni and mentored students in competitive programming and foundational software engineering.
- Supervised study group projects by helping teams define scope, divide tasks, use version control, and complete deliverables.

HONORS

Gemastik XVIII Competitive Programming | National Finalist | Indonesia **Oct 2025**

- Reached the national finals in a 3-person team by solving algorithmic problems involving data structures, graph theory, and dynamic programming.

ICPC Asia Jakarta 2024 | Regional Finalist | Indonesia **Nov 2024**

- Qualified for the Asia Jakarta Regional through the Indonesia National Contest and competed against top university programming teams.

Gemastik XVII Competitive Programming | National Finalist | Indonesia **Sep 2024**

- Reached the national finals by solving competitive programming problems focused on algorithms, optimization, and implementation efficiency.

PUBLICATION

Enhancing User-Side Fairness on Neural Collaborative Filtering Using Generative Adversarial **Jul 2026**
Network-Based Augmentation

2026 14th International Conference on Information and Communication Technology, ICoICT

Status: Accepted | **Track:** Data Science and Its Implementations | **Authors:** Radhofan Azizi Ramdhani, Rita Rismala
